

## Convenience – Lifestyle - Automation

iHome and Office specialise in the integration of multiple components in a home or office, into one easy to manage, centralised control system.

We have been in the industry since 2005, so we understand the product capabilities and how we could assist you with the latest technology, as well as energy saving systems.

We are able to Automate an existing house (using the conventional house wiring) as well as a project still in the planning or early building stage.

**We are the only company to guarantee their workmanship for 2 years.**

### Our Core Business:

- Home Automation / integration
- Building management systems
- Home Theatre
- Distributed Audio
- Home Network

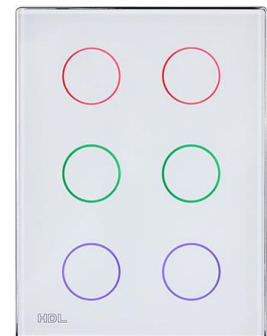

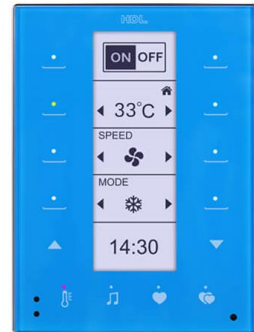

### Benefits:

1. Peace of mind, when you are away, you can remotely control your house, for example you can turn off the geyser or activate or de-activate your alarm for a guest.

2. Convenience, you can control multiple devices from one central location and with one button, for instance, press the home theatre button and the projector goes on, amp turns on, curtains close and lights dim. Or turn off all the lights when going to bed with the All Off function.

3. Cost Saving, Change what a switch does using software, no need to re-wire. Automation also reduces the number of switches in the home, with each switch capable of multiple functions.

4. Power saving, turn on a laundry light only when its occupied and the light level in that room is low. Turn off all lights in the house at 9am, just in case the kids have left the lights on and left for school. We can also control the geyser.

# iHome & Office

Convenience • Lifestyle • Automation

## What can we integrate:

- Lighting
- Air Conditioners
- Curtains & Blinds
- Distributed Audio throughout the home
- Home Theatre and DSTV
- Pool and water features
